

Ercros obtains a new recognition as an eco-innovative company

Ercros has obtained the certificate of the Reco-Inno project, which recognizes the proactivity of the company towards eco-innovation and environmental sustainability. This new certification is sponsored by the Resources and Energy Consumption Research Centre («Circe») and is awarded to companies from Aragon, Catalonia, Navarra and the Basque Country that are committed to ecological design and innovation.

The purpose of the Reco-Inno project, which is funded and supported by the Ministry of Economy and Competitiveness, is to disseminate and add value to the products and processes of the companies that promote environmental improvement and efficient use of resources.

By obtaining this certificate, Ercros may participate in sectoral meetings and disclose its more sustainable products and processes, and also use the logo that certifies the company's commitment to eco-innovation and sustainability.

This new certification joins to the different accreditations that already has Ercros in environmental matters (ISO 14001, ISO 14064, ISO 5001 and EMAS), quality (ISO 9001) and prevention (OHSAS 18001).
