

Students of the Mundus Erasmus Program of 20 nationalities visit the factory of Cerdanyola

A group of 30 students from more than 20 nationalities, who are studying a Master in Chemical Innovation and Regulation (EMMC-CHIR) at the University of Barcelona, in the framework of the Erasmus Mundus program, visited the Cerdanyola's factory of Ercros.

This Master's degree is a master's degree for professionals interested in the safety and regulation of chemical substances. The Erasmus Mundus program is the program of excellence of the European Commission for international cooperation and mobility in the field of higher education.

The visit began with an intervention by the director of the factory, Ángel Punzano, about Ercros and the Cerdanyola's factory and continued with an exit through the factory facilities. At the end, the students had the opportunity to exchange impressions and resolve the doubts they had with the center's managers.
