

The director of the Tarragona complex of Ercros, named president of Dixquímics

Joan Miquel Capdevila, director of the Ercros industrial complex of Tarragona, has been appointed president and CEO of Dixquímics, the entity that manages the network of pipes that connects the companies of the southern industrial area among them and the Tarragona harbour.

The pipe rack of Dixquímics manages annually more than 2,300 tons of chemical products; in this way transport of dangerous goods by road is avoided, CO₂ emissions to the atmosphere are reduced and the competitiveness of associated companies is improved.
