

Students from *Instituto Corona de Aragón* in Zaragoza visit the Ercros factory in Sabiñánigo

On January 15, a group of 39 Industrial Chemistry Degree students from C.P.I.F.P. *Corona de Aragón* in Zaragoza visited the Ercros factory in Sabiñánigo. The students, accompanied by three teachers, received the explanations of the technical staff. They showed them the operation of the centre and some details of the production process. After the explanation, began the guided tour in the factory, they visited the sodium chlorate and potassium chloride electrolysis plants. This was the part they enjoyed the most.

This visit was highly valued by both teachers and students, who were able to experience first-hand the reality in an industrial plant, the control of chemical processes and some organizational aspects.

The morning ended with a word of recognition by teachers who appreciated the availability of the technical personnel in Sabiñánigo to carry out these educational tours, essential for the training of future professionals.
