

## Students from Instituto Biello Aragon visit the Ercros' factory in Sabiñánigo

Ercros' factory in Sabiñánigo, as part of its educational role, has received the visit of the students from Instituto Biello Aragón, who are currently pursuing a degree in Automatic and Electronic Facilities and a degree in Automation and Industrial Robotics.

22 students, accompanied by their teachers and technical staff of Ercros, visited the sodium chlorate electrolysis plant, the high voltage facility and the potassium carbonate packaging plant. Due to the professional orientation of the students, the visit focused on aspects such as industrial electrical equipment and product packaging, which has a high level of automatization at the factory in Sabiñánigo.

The visit has been highly valued by students, since they have seen the practical development of the theoretical knowledge acquired in the classroom. Teachers rely on future visits with other promotions of students.
