

## Ercros signs an agreement with the Foundation for the Conservation and Recovery of Marine Animals

*Signature of the agreement at the CRAM headquarters. From left to right: Agustín Franco, general business director of Ercros, and José Luis Pal Margarit, president of CRAM.*

Ercros has signed a collaboration agreement with the Foundation for the Conservation and Recovery of Marine Animals (CRAM) by which chlorine derivatives will be supplied for the maintenance of aquariums where sea turtles are recovered. In this way, Ercros contributes to the protection of marine fauna and ecosystems.

In the same way, Ercros has reached an agreement with the chemical products distribution company, Brenntag, to collaborate in the packaging and transportation of the mentioned products from Ercros to the headquarters of the CRAM Foundation.

The CRAM Foundation is a private non-profit entity dedicated to the protection of the marine environment and the species that inhabit it. Its lines of action are the clinic and rescue of marine fauna, the research and conservation of species and the awareness in favour of preserving the seas and oceans.

Ercros is a chemical industrial group with a centuries-old tradition. It maintains a leading position in the markets where it's present and exports almost half of its sales to more than 93 countries, mainly in the EU.
