

**Ercros maintains its activity of supplying critical products  
to prevent the spread of Covid-19 and essential needs coverage**

(Note updated on 2-04-2020)

Ercros, as a critical operator and essential services operator, carries out an activity that is included in the Annex of the Royal Decree-Law 10/2020 and, therefore, it is not affected by the shutdown required for all non-essential services and activities, effective between March 30 and April 9.

Consequently, all our production centers continue to work at a normal pace, and our production and supply has not been affected. Additionally, we have taken the appropriate measures to ensure the availability of all the raw materials necessary to continue our activity and provide the essential services that are accredited to Ercros.

We have also reorganized our production scheme to prioritize the manufacture of those products that are a priority in the context of the Covid-19 crisis; specifically, for disinfection, purification, water treatment, and cleaning and hygiene.
