

From November 29 to December 2 | Hall 4 | Stand 95 | Gran Vía Venue

Ercros takes part in the Piscina & Wellness Exhibition in Barcelona

Ercros will participate in the Piscina & Wellness exhibition that will be held at Fira de Barcelona in the Gran Vía venue, from November 29 to December 2. At its stand, Ercros will show the products for the treatment of swimming pool water, which the company manufactures in Sabiñánigo (Huesca) and markets all over the world; products with which Ercros is positioned as the leading European manufacturer.

The TCCA tablets manufactured by Ercros are offering to the users the best safety and comfort features: disinfect pool water, do not contain boric acid, are 100% mercury free and include nanotechnology that allows the incorporation through microencapsulation of additives that repel mosquitoes or others, as fragrances that the market may demand.

Ercros products for the disinfection of swimming pools are manufactured in Spain, in a fully integrated production process, from basic raw materials (chlorine and caustic soda) also manufactured by Ercros.

In addition, the company is firmly committed to its contribution to the UN Sustainable Development Goals (SDGs); especially those that refer to the fight against climate change, the generalization of access to clean and sanitary water, the commitment to responsible production and consumption and the development of an industry that favours the well-being of society.

Barcelona, November 24, 2021
