

Five students from the Institut Comte de Rius carry out their internships at Ercros

Two students doing their internships at Vila-seca I

Five students of the Industrial Chemistry Higher Level Training Course of the Institut Comte de Rius have started their training internships at the Ercros Industrial Complex of Tarragona for a period of six months. These internships enable the students to organize and control operations in chemical and energy cogeneration plants and associated auxiliary services.

Of the five students, two are doing their internship at the Vila-seca I factory, two at the Vila-seca II factory and one at the Tarragona factory.

Ercros has signed several agreements with the Institut Comte de Rius, which provides technical and professional education and is recognized for the high level of its graduates.

The training agreements consist of a plan of training activities that is continuously evaluated. Each student has a tutor who monitors their progress during the internship period.

Ercros has a strong commitment to training, innovation and technology, as well as being involved in the social, labour, environmental and economic realities of its environment.
