

Ercros collaborates in the presentation of the project to obtain green hydrogen from renewable energies at the Expoebre fair in Tortosa

Ercros has collaborated with the Universitat Rovira i Virgili (URV) in the presentation of the project to obtain green hydrogen from renewable energies, within the framework of the multisectoral fair Expoebre, which is held in Tortosa from April 28 to May 1.

The URV, together with Ercros, are among the promoters of the creation of the Catalonia Hydrogen Valley. The company has projects underway to promote the use of green hydrogen as a renewable energy source, which is one of the pillars of the decarbonization strategy and the fight against climate change within the company's strategic plan, the 3D Plan.
