

4th ESO students of the Biello Aragón secondary school visit the Ercros factory at Sabiñánigo

A group of 32 students and three teachers from the 4th year of ESO at the Biello Aragón secondary school visited the Ercros factory in Sabiñánigo. This is a good opportunity for the young students, who these days have to decide what they want to study next year.

Before starting the visit, technical staff from the factory explained to the students how the company works, its different production centres, the industrial activity it carries out and, in more detail, the factory's production processes. Afterwards, students and teachers, accompanied by Ercros staff, visited the hydrogen peroxide and sodium chlorate plants.

The teachers have highly valued the visit since it is a good opportunity for the students to learn about the operation of an industrial plant located in the city where they live and a work sector with great professional projection.
