

## Ercros receives recognition from CDP for its management of climate change

The photovoltaic plant of the Ercros factory in Monzón

The international organization for the analysis and dissemination of data on environmental protection, the Carbon Disclosure Project (CDP), has once again awarded Ercros a global "B" rating for its performance against climate change and its sustainability performance.

This qualification recognises the company's commitment to decarbonisation, developed within the framework of its climate transition plan and its Plan 3D investment strategy, which promotes technological improvements and more sustainable processes in all its plants.

The "B" score, within the range of Management, certifies that Ercros assesses the impacts of its activity on the climate, takes significant actions to reduce its CO<sub>2</sub> emissions and transparently reports on its strategy, actions and results in terms of carbon footprint.

With this distinction, Ercros consolidates itself among the companies that report transparently and act effectively in the face of climate change, showing tangible results of its sustainability strategy.
