

High school students from IES Almussafes visit the Ercros factory

A group of 26 second-year Baccaulaureate students from IES Almussafes, accompanied by three teachers, visited the Ercros factory in the town.

Before beginning the tour of the plant, technical staff from Ercros gave a presentation about the company, its activities, its various facilities, and the production processes. Afterward, the students visited the laboratory, the maintenance workshops, and the finished product warehouses.

Both the students and the teachers gave the experience very positive feedback and highlighted the value of seeing Ercros's production activities firsthand and gaining a better understanding of how the concepts they learn in the classroom are applied in practice.
