

## **Students from the polytechnic universities of Bucharest and Madrid visit the Ercros factory in Aranjuez**

A group of undergraduate, master's and doctoral students from the area of Chemical Engineering at the Polytechnic University of Madrid and the Polytechnic University of Bucharest (Romania), visited the Ercros factory in Aranjuez.

During the day, the students, accompanied by Ercros technicians, toured the facilities where antibiotics are manufactured and were able to observe the large-capacity bioreactors, as well as visit the extraction plant, the control laboratory and the service plant. The visit allowed them to understand first-hand the complexity associated with biological production on an industrial scale.

Ercros maintains a firm commitment to the transmission of knowledge and to the learning of future generations of professionals. For this reason, it adapts each training visit to the academic and technical level of the attendees, while strengthening the link between the company and the university environment.
