

Officials from the Madrid Fire Department visit the Ercros factory in Aranjuez

The Ercros factory in Aranjuez received a visit this week from two officials of the Madrid Community Fire Department: Alfredo Íñiguez Moreno, supervising chief, and Francisco José Vasto, prevention technician.

The purpose of the visit was to gain firsthand knowledge of the factory's access points and facilities, as well as the company's firefighting equipment. They were accompanied by Manuel Gómez, head of Prevention and Environment for Ercros's pharmaceutical division, with whom they toured the plants for over two hours and discussed the emergency plan.

Both Ercros and the firefighters gave the visit a very positive assessment and agreed that the Aranjuez firefighting team would participate in future drills at the facility.
