

Danish vocational students visit the Ercros factory in Sabiñánigo

The Ercros factory in Sabiñánigo recently hosted a visit from a group of students and teachers from the Danish school Skjern Tekniske Skole, who are participating in an Erasmus exchange program with IES Biello Aragón, where they are undertaking specialized training in electricity and mechanics.

The visit was part of the activities organized by the school during their stay in the town. After a presentation about the factory's operations, the participants toured the chlor-alkali and chlorate plants, accompanied by Ercros technical staff.

The event highlighted the international scope of this educational initiative and Ercros's commitment to training and knowledge exchange in a real industrial setting. It fosters contact between schools in different countries and introduces European students and teachers to the operations and processes of a chemical company with an international presence.
