

## **Ercros participates in a series of prevention workshops organized by Interior and Civil Protection of Aragon**

Group photo of the participants in the event

The Ercros factory in Sabiñánigo has been chosen as the setting for a practical emergency scenario exercise as part of a training course on risk prevention and management in cross-border areas.

This activity, in collaboration with the Department of the Interior and Civil Protection of Aragon, is part of the European project POCTEFA ALERT-PYR, which aims to share experiences in cross-border emergency management among the project partners (emergency services from Gipuzkoa, Navarre, Aragon, the Aran Valley, and France).

The participants visited the factory in Sabiñánigo, where they received a presentation about the center and the response resources of the Self-Protection Plan, followed by a tour of the facilities.

Afterwards, the attendees worked in groups on a reflection and analysis exercise based on a practical emergency scenario designed specifically for the training sessions.
