

Bondalti and Ercros together at Expoquimia following the integration of both companies

Bondalti and Ercros will jointly participate in the upcoming edition of Expoquimia 2026, marking the first major public presentation of the two companies following the integration of both groups.

Their joint presence at the leading chemical industry event in Southern Europe symbolizes the beginning of a new phase for both companies, which are already working in a coordinated manner to strengthen their industrial capabilities and international competitiveness.

The integration of Bondalti and Ercros enables the combined group to offer a broader and more complementary portfolio, with increased production capacity and solutions for a wide range of sectors and customers.

Bondalti will showcase its capabilities in chlorine and derivatives, aniline and derivatives, as well as its solutions related to the integrated water cycle. Ercros, for its part, will present products from its chlorine and derivatives, intermediate chemicals and pharmaceuticals business areas, with special emphasis on the new Etinox® Renew PVC resin range, featuring a low carbon footprint.

In addition, Bondalti Water will participate in Expoquimia's technical programme focused on industrial water and the sustainable management of water resources, presenting case studies and solutions aimed at resource optimisation and more efficient and sustainable management in industrial environments.

Alongside their joint presence in the exhibition area, Bondalti and Ercros will also take an active role in Smart Chemistry: Green Industry Deal, the space promoted by Feique within the framework of Expoquimia, where they will present initiatives related to industrial decarbonisation, lower-carbon products and strategies aimed at strengthening the competitiveness of the European chemical industry.

The joint participation at Expoquimia reflects the industrial ambition of the new business project created following the integration of both companies, based on the combination of experience, talent and production capabilities, with the aim of multiplying opportunities, synergies and growth potential to drive a more innovative, competitive and sustainable chemical industry.

Barcelona, 28 May 2026
