Ercros has once again participated as a collaborating entity and member of the jury of the X(p)rimenta 2026 Audiovisual Scientific Communication Award, an initiative of the Catalan Foundation for Research and Innovation and the Catalan Association of Scientific Communication that promotes scientific vocations among young people through experimentation and audiovisual communication.

Sebastian Espino, Director of Innovation and Development at Ercros, participated in the awards ceremony of the sixteenth edition of the contest, which brought together 106 videos made by students and teachers from schools in Catalonia. Miquel Gómez Clares, general director of the Catalan Foundation for Research and Innovation, also spoke at the event.

Among the works presented, several proposals from municipalities in which Ercros has production centres stand out. In this sense, the Institut Tarragona won the first prize in the category of Baccalaureate and training cycles, while the Institut de Tortosa presented five videos, two of which were finalists.

Ercros congratulates the award-winning schools and the finalists, and recognizes the effort, creativity and commitment of all the students and teachers who have participated in this edition of X(p)rimenta.
