

Ercros obtains the European NIS2 certification in cybersecurity

Ercros has obtained NIS2 certification after successfully passing an independent audit that confirms compliance with the requirements established by the European NIS2 directive on cybersecurity.

The certification recognizes that the company has the necessary measures, processes, and controls in place to manage the security risks of its information systems and strengthen its protection against cyber threats.

The NIS2 directive constitutes the new European framework for raising the level of cybersecurity for organizations that provide essential services or carry out strategic activities. Its objective is to strengthen the capacity for prevention, detection, and response to incidents that could affect business continuity.

Obtaining this certification is the result of the work carried out by the Information Systems department, in collaboration with the various departments of the company, to implement and maintain the measures required by this standard.
