Aranjuez receives visits from students from Madrid's leading universities

The Ercros factory in Aranjuez has received visits from several groups of students from the Polytechnic University of Madrid (UPM), the Complutense University (UCM) and the Autonomous University (UAM) from degrees and postgraduate programs linked to chemical engineering, biotechnology and industrial processes.

The four visits, received in the months of October and November, included a detailed tour of the production facilities of the pharmacy division, where the students were able to learn first-hand about the manufacturing processes, as well as the technological capabilities of each plant.

Among the most valued aspects are the areas of industrial fermentation and synthesis plants, which aroused special interest due to their level of development, technical complexity and application in the production of active pharmaceutical ingredients.

These visits are part of Ercros' commitment to the training of future professionals and to the dissemination of scientific and industrial knowledge, keeping its doors open to the academic community to bring the reality of the pharmaceutical industry closer.
